

- Three-pole versions up to 630A in IEC AC3 duty
- Four-pole versions up to 1600A in IEC AC1 duty
- Versions for power factor correction up to 60kvar at 400VAC
- Four-pole versions with 2NO+2NC or 4NC main poles
- Low-consumption versions with DC control circuit for control relays and 9-38A contactors in IEC AC3 duty
- Versions with AC or DC control
- Extensive choice of add-on blocks and accessories
- Certified by primary international authorities.

BG series mini-contactors

2

Unique features

- Highly conductive auxiliary contacts with four contact points
- AC and DC versions of same size
- Quick connect - snap on accessory mounting
- Distinct contact status indication
- Up to four auxiliary contacts can be mounted
- Mechanical interlock only 5mm deep
- Positive (force) guided contacts (mechanically-linked per IEC)
- Three-pole mini-contactors, 6 to 12A IEC AC3 duty / 3 to 7.5HP 480V - 3 to 10HP 600V UL/CSA
- Four-pole mini-contactors, 20A IEC AC1 duty
- Versions with 2NO+2NC main power poles
- Highly conductive auxiliary contacts
- AC or DC auxiliary supply
- Low-consumption DC versions
- Screw, faston and rear PCB solder pin termination.

¹ Low-consumption version.

B series contactors

Unique features

- 3 frame sizes offering 11 different contactors
- Coil operate indifferently on AC or DC supply voltage
- Coil with low in-rush and holding
- Coil removable without disconnecting power wiring
- Red indicator when contactor is energised
- Unique right-angle magnet design - limits contact bounce
- Safety feature prevents contactor to be energised without arc chute in place and locked
- Convertible auxiliary contact block (2NO + 1NC or 1NO + 2NC), maximum of 4 blocks per contactor for a total of 12 contacts
- Contactor terminals with bolt, washer and nut
- Simple horizontal or vertical interlock
- Positive (force) guided contacts (mechanically-linked per IEC)
- Three-pole contactors, 110 to 630A IEC AC3 duty
- Four-pole contactors, 160 to 1600A IEC AC1 duty
- 100 to 500HP 600V UL/CSA
- Screw termination.

General information - IEC contactors

Lovato Electric comprehensive line of contactors can be divided in to three basic configurations as illustrated above. Each of these have unique features but all are designed for long life and have finger-safe protection. Lovato Electric facilities, where these contactors are manufactured, work under ISO 9001 quality conditions, per IQNet certification since 1992 and constantly maintained by passing yearly quality assurance audits. The design and manufacture of the contactors and accessories have taken into consideration the most demanding requirements of international standards.

Non-reversing and reversing IEC starters

Contactors can be combined with either manual motor starters of the SM series, providing thermal and magnetic protection up to 100A, or single or three-pole thermal bimetallic overload relays, with or without single-phase protection up to 420A, to obtain non-reversing or reversing starters. Equipment can be assembled together or independently mounted through the use of specifically designed accessories.

Non-reversing starter

Reversing starter

THE IDEAL SOLUTION!

- **45mm WIDE CONTACTORS**
 Ratings up to 38A - 18.5kW IEC AC3 / 30HP
 UL - merely 45mm wide: exceptional benefit for electric panel dimensions.

- **WIDE OPERATING RANGE**
 BF...D contactors are equipped with a wide operating range coil and are particularly useful in applications subject to considerable voltage variations, such as in electric traction railway equipment.

- **4-TERMINAL COIL**
 Connecting cables can be coupled to the coil both on the line and load ends of the contactor.

- **BUILT-IN SURGE SUPPRESSOR**
 The BF00 to BF38 contactors with standard voltage DC coils include a built-in surge suppressor.

- **LOW-CONSUMPTION COILS**
 The BF...L contactors feature a 2.4W low consumption. This characteristic widely allows their direct control by PLC outputs.

2

- **SIDE ADD-ON FOURTH POLE**

For the 45A and 56A AC1 ratings, a side-mount fourth power pole can be snapped on the three-pole contactor. This solution permits to optimise inventory.

- **MECHANICAL INTERLOCK**

Smaller-size contactors, 9 to 25A in AC3, can be mechanically and electrically interlocked with larger-size contactors, 26 to 38A AC3. The BFX50 01 mechanical interlock comprises two built-in NC auxiliary contacts to make the electrical interlock as well.

- **35mm DIN RAIL MOUNTING AND FIXING**

Contactors mounting on and removal from a 35mm DIN rail are tool-less operations and are done by simply applying pressure on the contactor.

- **STARTER ASSEMBLY**

The assembly and wiring of electromechanical starters is extremely fast and reliable. Versatile electrical and mechanical connecting systems provide easy and foolproof assembly of compact starters.

- **EFFORTLESS THERMAL OVERLOAD RELAY LINK**

During the connection of the thermal overload relay to the contactor, its auxiliary contact is simultaneously linked to the contactor coil terminal rigid connector. The complete overload relay fixing is obtained with one single operation and without other connections.

- **TERMINAL ADAPTABILITY**

Terminals are suitable for every type of cable: flexible, rigid, according to AWG standards and interlocked with any type of cable terminal. Power pole, auxiliary and coil screws can be tightened using one single type of screwdriver.

- **SNAP-ON INSTALLATION**

Mounting and removal of the add-on auxiliary contacts and accessories, along with BF09 to BF38 AC contactor coil replacement are quick and easy operations and are done with no tools.

- **RUBBER PAD INSERT FOR NO DIN RAIL SLIDING**

A rubber insert prevents the contactors from sliding on the 35mm DIN rail even when out of tolerance or mounted vertically.

- **FRONT PROTECTION COVER FOR BREAKER - CONTACTOR CONNECTIONS**

The front cover, fixed between breaker and contactor, provides protection to the connections.

- **IP20 CONNECTION SECURITY**

The ease of terminal access and space is combined with IP20 finger safety, to prevent touching of live parts.

- ① Complete order code with coil voltage digit or with voltage digit followed by 60 (if 60Hz). Standard voltages are as follows:
 - AC 50/60Hz 024 / 048 / 110 / 230 / 400V
 - AC 60Hz 024 60 / 048 60 / 120 60 / 220 60 / 230 60 / 460 60 / 575 60 (V).
 Example: 11 BG06 10 A230 for mini-contactor BG06, three poles, with one NO contact and 230VAC 50/60Hz coil.
 11 BG06 10 A460 60 for mini-contactor BG06 with one NO contact and 460VAC 60Hz coil.
- ② The coil of the contactor can be powered indifferently in AC or DC. Complete the order code only with the digit of the coil voltage. Standard voltages are:
 - AC/DC 24 / 48 / 60 / 110-125 (indicate 110) / 220-240 (indicate 220) / 380-415 (indicate 380) / 440-480V (indicate 440).
 Example: 11 B145 00 110 for contactor B145, three poles, without auxiliary contacts and with 110-125VAC/DC coil.
 The 24VAC/DC voltage is not possible for B500-B630 1000 contactors.
 Other voltages available on request.
- ③ If predisposed for mechanical latch (G495), the order code becomes 11 B...SL.00 ②
 If already fitted with mechanical latch (G495), the order code becomes 11 B...L.00 ② ④

- ④ Indicate rated voltage of the mechanical latch, preceded by the letter C if in DC. Available voltages are:
 - AC 50/60Hz 48 / 110-125 indicate 110 / 220-240 indicate 220 / 380-415V indicate 380
 - DC 48 / 110-125 indicate 110 / 220-240V indicate 220.
 Example: 11 B145L 00 110 220 for contactor B145 without auxiliary contacts, with 110-125VAC/DC coil and mechanical latch powered at 220-240VAC.
- ⑤ G495 mechanical latch cannot be mounted.
- ⑥ Complete the order code with the digit of the coil voltage. For 110-125VAC (50/60Hz) indicate 110 or 220-240VAC (50/60Hz) indicate 220.
 Example: 11 B1250 24 110 for contactor B1250, three poles, with 2NO+4NC auxiliary contacts and 110-125VAC 50/60Hz coil.
- ⑦ Maximum voltage is limited at 300V for UL. For certified type up to 600V, consult Customer Service for information; see contact details on inside front cover.
- ⑧ For voltages 024 / 230 / 400VAC 50-60Hz: 10 pieces/package.
 For all other voltages: 1 piece/package.
- ⑨ Highly conductive auxiliary contact.
- ⑩ For use at this other current value, a 16mm² cable, headed with a fork terminal, must be used.
- ⑪ No UL/CSA ratings; data only for indication and reference purposes only.
- ⑫ Definite-purpose (DP) contactors are available. Consult Customer Service for information; see contact details on inside front cover.

UL - UL Listed, for USA and Canada (cULus - File E93602) for BG... BF110 types indicated, as Motor Controllers - Contactors, except for BGP09... types which are UL Recognized, for USA and Canada (File E93602 - Component - Products having this type of marking are intended for use as components of complete workshop-assembled equipment). BGP is UL rated up to 300V; for type with rating up to 600V, consult Customer Service for information - see contact details on inside front cover.

UL Listed for USA only (File E93602) for B115...B400 types indicated, as Motor Controllers - Contactors. For B500..., B630... and B630 1000 types, UL Listing is pending completion at time of catalogue printing.

CSA - BF09...BF95 and B115...B400 contactors are also CSA certified, for Canada only (File 54332). In addition, BF12..., BF25..., BF38... and BF65... type are CSA certified as "Elevator Equipment" (File 54332, class 2411). See technical characteristics on page 2-63 for BF12-BF38 and page 2-65 for BF65.

Compliant with standards: IEC/EN 60947-1, IEC/EN 60947-4-1, UL508, CSA C22.2 n° 14.

- ① Complete order code with coil voltage digit. Standard voltages are as follows:
— DC 012 / 024 / 048 / 060 / 110 / 125 / 220V.
Example: 11 BG06 10 D012 for mini-contactor BG06, three poles, with one NO contact and 12VDC coil.
- ② Low-consumption version. No add-on auxiliary contacts or mechanical interlock can be mounted on BG... type contactors. Complete order code with coil voltage digit. Standard voltages are as follows:
— DC 024 / 048V.
Example: 11 BG09 01 L024 for mini-contactor BG09, three poles, with one NC contact and 24VDC low-consumption coil.
- ③ Maximum combinations of add-on blocks are given on page 3-19.
- ④ The coil of the contactor can be powered indifferently in AC or DC. Complete the order code only with the digit of the coil voltage. Standard voltages are:
— AC/DC 24 / 48 / 60 / 110-125 (indicate 110) / 220-240 (indicate 220) / 380-415 (indicate 380) / 440-480V (indicate 440).
Example: 11 B145 00 110 for contactor B145, three poles, without auxiliary contacts and with 110-125VAC/DC coil.
The 24VAC/DC voltage is not possible for B500-B630 1000 contactors. Other voltages available on request.

- ⑤ If predisposed for mechanical latch (G495), the order code becomes 11 B...SL00^④. If already fitted with mechanical latch (G495), the order code becomes 11 B...L00^④ ⑤.
- ⑥ Indicate rated voltage of the mechanical latch, preceded by the letter C if in DC. Standard voltages are:
— AC 50/60Hz 48 / 110-125 indicate 110 / 220-240 indicate 220 / 380-415V indicate 380
— DC 48 / 110-125 indicate 110 / 220-240V indicate 220.
Example: 11 B145L 00 110 C48 for contactor B145, three poles, without auxiliary contacts, with 110-125VAC/DC coil and mechanical latch powered at 48VDC.
- ⑦ G495 mechanical latch cannot be mounted.
- ⑧ Maximum voltage is limited at 300V for UL. For certified type up to 600V, consult Customer Service for information; see contact details on inside front cover.
- ⑨ Highly conductive auxiliary contact.
- ⑩ For use at this other current value, a 16mm² cable, headed with a fork terminal, must be used.
- ⑪ No UL/CSA ratings; data only for indication and reference purposes only.
- ⑫ Definite-purpose (DP) contactors are available. Consult Customer Service for information; see contact details on inside front cover.

- UL - UL Listed, for USA and Canada (cULus File E93602) for BG...BF110 types indicated, as Motor Controllers – Contactors, except for BGP09... types which are UL Recognized, for USA and Canada (cULus File E93602 – Component). Products having this type of marking are intended for use as components of complete workshop-assembled equipment. BGP is UL rated up to 300V; for type with rating up to 600V, consult Customer Service for information – see contact details on inside front cover.
- UL Listed for USA only (File E93602) for B115...B400 types indicated, as Motor Controllers – Contactors. For B500..., B630... and B630 1000 types, UL Listing is pending completion at time of catalogue printing.
- CSA - BF09...BF95 and B115...B400 contactors are also CSA certified, for Canada only (File 54332). In addition, BF12..., BF25..., BF38... and BF65... type are CSA certified as "Elevator Equipment" (File 54332, class 2411). See technical characteristics on page 2-63 for BF12-BF38 and page 2-65 for BF65.

Compliant with standards: IEC/EN 60947-1, IEC/EN 60947-4-1, UL508, CSA C22.2 n° 14.

- ① Complete order code with coil voltage digit or voltage digit followed by 60 if 60Hz. Standard voltages are as follows:
 - AC 50/60Hz 024 / 048 / 110 / 230 / 400V
 - AC 60Hz 024 60 / 048 60 / 120 60 / 220 60 / 230 60 / 460 60 / 575 60 (V).
 Example: 11 BG09 T4 A230 for mini-contactor BG09, four poles, with 230VAC 50/60Hz coil. 11 BG09 T4 A460 60 for mini-contactor BG09, four poles, with 460VAC 60Hz coil.
- ② The coil of the contactor can be powered indifferently in AC or DC. Complete the order code only with the digit of the coil voltage. Standard voltages are:
 - AC/DC 24 / 48 / 60 / 110-125 (indicate 110) / 220-240 (indicate 220) / 380-415 (indicate 380) / 440-480V (indicate 440).
 Example: 11 B145 4 00 110 for contactor B145, four poles, without auxiliary contacts and with 110-125VAC/DC coil.
- The 24VAC/DC voltage is not possible for B500-B630 1000 contactors. Other voltages available on request.
- ③ If predisposed for mechanical latch (G495), the order code becomes 11 B...4SL 00 ②. If already fitted with mechanical latch (G495), the order code becomes 11 B...4L.00 ② ④.
- ④ Indicate rated voltage of the mechanical latch, preceded by the letter C if in DC. Standard voltages are:
 - AC 50/60Hz 48 / 110-125 indicate 110 / 220-240 indicate 220 / 380-415V indicate 380
 - DC 48 / 110-125 indicate 110 / 220-240V indicate 220.
 Example: 11 B145 4L 00 110 C220 for contactor B145, four poles, without auxiliary contacts, with 110-125VAC/DC coil and mechanical latch powered at 220-240VDC.

- ⑤ G495 mechanical latch cannot be mounted.
- ⑥ Complete the order code with the digit of the coil voltage. For 110-125VAC 50/60 Hz indicate 110 or 220-240VDC 50/60 Hz indicate 220. Example: 11 B1250 4 24 110 for contactor B1250, four poles, with 2NO+4NC auxiliary contacts and 110-125VAC/DC 50/60Hz coil.
- ⑦ Maximum voltage is limited at 300V for UL. For certified type up to 600V. Consult Customer Service for information; see contact details on inside front cover.
- ⑧ Whenever the BF26 T4 or BF38 T4 types need to be mechanically interlocked with either the BFX50 00 or BFX50 01, the add-on fourth pole of one of the contactors needs to be removed from the right side and fitted on the left side.
- ⑨ For use at this other current value, a 16mm² cable, headed with a fork terminal, must be used.
- ⑩ Definite-purpose (DP) contactors are available. Consult Customer Service for information; see contact details on inside front cover.

IEC utilisation current with poles in parallel

If the poles of the contactors are arranged in parallel, the operating current is the one indicated in the table multiplied by the **K** factor given below, which account for the unequal distribution of the current in the various poles. To limit distribution inequality, it is advisable to use paralleling links (see pages 2-16, 2-21 and 2-26).

2 POLES in parallel: **K** = 1.6

3 POLES in parallel: **K** = 2.2

4 POLES in parallel: **K** = 2.8

UL - UL Listed, for USA and Canada (cULus File E93602) for BG...BF110 types indicated, as Motor Controllers – Contactors, except for BGP09... types which are UL Recognized, for USA and Canada (cULus File E93602 – Component). Products having this type of marking are intended for use as components of complete workshop-assembled equipment.

BGP is UL rated up to 300V; for type with rating up to 600V, consult Customer Service for information – see contact details on inside front cover.

UL Listed for USA only (File E93602) for B115...B400 types indicated, as Motor Controllers – Contactors.

For B500..., B630... and B630 1000 types, UL Listing is pending completion at time of catalogue printing.

CSA - BF09...BF95 and B115...B400 contactors are also CSA certified, for Canada only (File 54332).

In addition, BF12..., BF25..., BF38... and BF65... type are CSA certified as "Elevator Equipment" (File 54332, class 2411). See technical characteristics on page 2-63 for BF12-BF38 and page 2-65 for BF65.

Compliant with standards: IEC/EN 60947-1, IEC/EN 60947-4-1, UL508, CSA C22.2 n° 14.

① Complete order code with coil voltage digit.

Standard voltages are as follows:

– DC 012 / 024 / 048 / 060 / 110 / 125 / 220VDC.

Example: 11 BG09 T4 D012 for mini-contactor BG09, four poles, with 12VDC coil.

② Low consumption version. Complete the order code with coil voltage digit.

Standard voltages are as follows:

– DC 024 / 048V

Example: BF09 T4 L024 for contactor BF09, four poles, with 24VDC low-consumption coil.

③ Maximum combinations add-on blocks are page 3-19.

④ The coil of the contactor can be powered indifferently in AC or DC. Complete the order code only with the digit of the coil voltage.

Standard voltages are:

– AC/DC 24 / 48 / 60 / 110-125 indicate 110 / 220-240 indicate 220 / 380-415 indicate 380 / 440-480V indicate 440.

Example: 11 B145 00 110 for contactor B145, four poles, without auxiliary contacts and with 110-125VAC/DC coil.

The 24VAC/DC voltage is not possible for B500-B630 1000 contactors.

Other voltages available on request.

⑤ If predisposed for mechanical latch (G495), the order code becomes 11 B...4SL 00 ④.

If already fitted with mechanical latch (G495), the order code becomes 11 B...4L 00 ④ ⑤.

⑥ Indicate rated voltage of the mechanical latch, preceded by the letter C if in DC.

Standard voltages are:

– AC 50/60Hz 48 / 110-125 indicate 110 / 220-240 indicate 220 / 380-415V indicate 380

– DC 48 / 110-125 indicate 110 / 220-240V indicate 220.

Example: 11 B145L 00 110 C48 for contactor B145, four poles, without auxiliary contacts, with 110-125VAC/DC coil and mechanical latch powered at 48VDC.

⑦ G495 mechanical latch cannot be mounted.

⑧ Maximum voltage is limited at 300V for UL. For certified type up to 600V consult Customer Service for information; see contact details on inside front cover.

⑨ For use at this other current value, a 16mm² cable, headed with a fork terminal, must be used.

⑩ Definite-purpose (DP) contactors are available. Consult Customer Service for information; see contact details on inside front cover.

BF50K	58	80
BF65K	70	100
BF70K	75	125
BF80K	90	125

Ambient operating temperature: ≤50°C. For ambient temperatures higher than 50°C and up to 70°C, the maximum operating power values indicated in the table must be reduced by a percentage equal to the difference between the operating ambient temperature and 50°C. E.g.: Using a BFK26 00 contactor at the ambient temperature of 60°C, the maximum operating power (at 400V) of the contactor will be equal to 20kvar - 10% = 18kvar. Operating cycle: ≤120 cycles/h. Electrical life: ≥200,000 cycles.

Add-on auxiliary contacts

The following contact blocks, can be fitted on the BFK contactors: BFX12..., G418..., G481..., G482... and G218.

Certifications and compliance

Certification obtained: CCC, GOST and UL Listed for USA and Canada (File E93602), as Motor Controllers - Magnetic Capacitive Switches.

Compliant with standards: IEC/EN 60947-1, IEC/EN 60947-4-1, UL508, CSA C22.2 n° 14.

Kits to assemble BFK contactors

ⓐ Complete with coil voltage digit if 50/60Hz or with voltage digit followed by 60 if 60Hz. Standard voltages are:
 - AC 50/60Hz 024 / 048 / 110 / 230 / 400V
 - AC 60Hz 024 60 / 048 60 / 120 60 / 220 60 / 230 60 / 460 60 / 575 60 (V).
 Example: 11 BG09 T2 A230 for mini-contactor BG09 T2, 2 poles NO and 2 poles NC, with 230VAC 50/60Hz coil.
 11 BG09 T2 A460 60 for mini-contactor BG09 T2, 2 poles NO and 2 poles NC, with 460VAC 60Hz coil.

ⓑ Complete with coil voltage digit.
 Standard voltages are:
 - DC 012 / 024 / 048 / 060 / 110 / 125 / 220V.
 Example: 11 BG09 T2 D012 for mini-contactor BG09 T2, 2 poles NO and 2 poles NC, with 12VDC coil.

ⓒ Low-consumption version.
 Complete the order code with coil voltage digit.
 Standard voltages are as follows:
 - DC 024 / 048V.
 Example: BF18 T2 L024 for contactor BF18 T2, 2 poles NO and 2 poles NC, with 24VDC low-consumption coil.

ⓓ Maximum combinations of add-on blocks are given on page 2-19.

ⓔ For use at this other current value, a 16mm² cable, headed with a fork terminal, must be used.

① Complete order code with coil voltage digit or with voltage digit followed by 60 if 60Hz.

Standard voltages are:

– AC 50/60Hz 024 / 048 / 110 / 230 / 400V

– AC 60Hz 024 60 / 048 60 / 120 60 / 220 60 / 230 60 / 460 60 / 575 60 (V).

Example: 11 BG00 40 A230 for control relay BG00 with four NO auxiliary contacts and 230VAC 50/60Hz coil.

11 BG00 40 A460 60 for control relay BG00 with four NO auxiliary contacts and 460VAC 60Hz coil.

② Complete the order code with coil voltage digit.

Standard voltages are:

– DC 012 / 024 / 048 / 060 / 110 / 125 / 220V.

Example: 11 BG00 40 D012 for control relay BG00 with four NO auxiliary contacts and 12VDC coil.

③ Low-consumption version. No additional auxiliary contacts or the mechanical interlock can be mounted.

Complete the order code with coil voltage digit.

Standard voltages are:

– DC 024 / 048V.

Example: 11 BG00 40 L024 for control relay BG00 with four NO auxiliary contacts and 24VDC low-consumption coil.

④ All contacts are highly conductive.

Operational characteristics

- IEC rated insulation voltage U_i : 690V
- IEC rated conventional free air thermal current I_{th} : 10A
- UL/CSA and IEC/EN 60947-5-1 designation: A600-Q600
- Low-consumption version cannot accept additional contacts.

NOTE: No coil change or replacement is possible.

Certifications and compliance

Certification obtained: CCC, GOST and UL Listed for USA and Canada (File E93602), as Motor Controllers - Auxiliary contactors.

Compliant with standards: IEC/EN 60947-1, IEC/EN 60947-5-1, UL508, CSA C22.2 n° 14.

- ① Cannot be used with BG...L types.
- ② Cannot be used with BG...D and BG...L types.
- ③ Suitable for left-hand mini-contactor only of BGT and BGTP reversing and BGC changeover assemblies.
- ④ The shroud can be used with BG... types with screw termination only and with no auxiliary contacts, surge suppressor or mechanical interlock mounted. It raises the front degree of protection of the mini-contactor when these are used in consumer switchboards.
- ⑤ Cannot be used with BGX80 00 shroud.
- ⑥ Contactors with one NC auxiliary contact, 01 type, are usually used for reversing assemblies. The relay cannot be directly mounted on the contactor. Use the RF38 type and the RFX38 04 independent mounting base.
- ⑦ All contacts are each SPST.

- ① Different sized contactors can be interlocked.
Example: BF09-BF25 with BF26-BF38.
BFX50 01 contacts are each SPST.
- ② Replace with the digit of the voltage if 50 or 60Hz and with the letter C followed by the digit of the voltage if DC.
Standard voltages are:
– 50/60Hz 24 / 48 / 110-125 indicate 110 / 220-240 indicate 220 / 380-415V indicate 380.
– DC 12 / 24 / 48 / 110-125 indicate 110 / 220-240V indicate 220.

Add-on blocks for AC contactors

2

Combinations: Mounting position on BF00 A and BF09 A-BF110 contactors
Table with combinations: See page 2-19.

- ❶ Mounting not possible if front lateral contacts or mechanical interlock BFX50 00 or BFX50 01 are mounted.
- ❷ If the G222 latch is mounted, no front lateral contacts can be fitted on contactors BF00A and BF09A to BF38A.
- ❸ No add-on block can be mounted on front when the manual closing mechanism G454 or G455 is fitted.

Combinations: Mounting position on BF00 A and BF09 A-BF38 A contactors with mechanical latch G222 fitted
Table with combinations: See page 2-19.

Combinations: Mounting position on BF50-BF110 contactors with mechanical latch G272 fitted
Table with combinations: See page 2-19.

- ❹ Mounting not possible if front lateral contacts are fitted.

Add-on blocks for DC and DC low consumption contactors

Combinations: Mounting position on BF00 and BF09-BF38, D and L versions
 Table with combinations: See page 2-19.

- ❶ Mounting not possible when the G222 mechanical latch is fitted.
- ❷ The G222 mechanical latch cannot be fitted on BF26 L - BF38 L four-pole types.
- ❸ No add-on block can be mounted on front when the G454 manual closing mechanism is fitted.

Combinations: Mounting position on BF50 C - BF110 C contactors with G272 mechanical latch fitted
 Table with combinations: See page 2-19.

- ❹ No add-on block can be mounted on front when the G455 manual closing mechanism is fitted.
- ❺ Mounting not possible if front lateral contacts are fitted.

Accessories for AC, DC and DC low consumption contactors

2

Combinations

Accessories for AC, DC and DC low consumption contactors

Rigid reversing contactor assembly connecting kits for BF09-BF25 contactors with BFX50 02 or BFX50 03 mechanical interlock

RF38 thermal overload relay can be mounted only on left side contactor.

Rigid reversing contactor assembly connecting kits for BF09-BF25 contactors with BFX50 00 or BFX50 01 mechanical interlock

RF38 thermal overload relay can be mounted only on left side contactor.

Rigid reversing contactor assembly connecting kits for BF26-BF38 contactors with BFX50 02 or BFX50 03 mechanical interlock

RF38 thermal overload relay can be mounted only on left side contactor.

Rigid star-delta starter assembly connecting kits for BF09-BF25 contactors

Rigid star-delta starter assembly connecting kits for BF26-BF38 contactors

Rigid star-delta starter assembly connecting kits for BF26-BF38 (line-delta) and BF09-BF25 (star) contactors

● Certified products.

UL - UL Recognized for USA only (File E93601) as Auxiliary Devices - Component.

Products having this type of marking are intended for use as components of complete workshop-assembled equipment.

CSA - CSA certified for Canada only (File 54332) as Auxiliary Devices for motor controllers.

Compliant with standards: IEC/EN 60947-1, IEC/EN 60947-4-1, UL508, CSA C22.2 n° 14; add-on auxiliary contacts also comply with IEC/EN 60947-5-1.

① Only one piece can be mounted on B1250 or B1600 type.

② Not suitable for B630 1000, B1250, B1600.

③ For use with three-pole B630 1000, consult Customer Service; see contact details on inside front cover.

④ Allowed distances see page 2-70.

⑤ To interlock two contactors B1250 or B1600, it is imperative to use two pieces of type G356 6, one fixed on the left side and the other on the right.

⑥ Replace with the digit of the voltages if 50 or 60 Hz or with the letter C followed by voltage if DC. The standard voltages are:
- AC 50/60Hz 48 - 110/125 indicate 110 - 220/240 indicate 220 - 380/415 indicate 380

- DC 48 - 110/125 indicate 110 - 220/240 indicate 220

⑦ It can be mounted only in contactors if predisposed for it.

⑧ Except for B310 and B310 4.

⑨ Provided for one pole terminal only. Example: For three-pole contactors, purchase 3 pieces for the upper terminals only or 6 pieces for all upper and lower terminals.

⑩ Replace with the required alphanumeric symbol; each package contains 100 pieces of the same symbol.

Combinations: Mounting position on B115-B630 contactors

The add-on auxiliary contact blocks G350 and G354 can be applied to contactors B115-B630 1000 only up to a maximum of four pieces for each contactor, for a total of 12 contacts.

The contact block G350 provides a 2NO+1NC or 1NO+2NC combination depending on its mounting position; see the drawing below. The G354 block consists of 1NO+1NC.

Contact blocks, BFX10 with 2 contacts, G484, G485, G486 and G487 types, can be mounted using the G358 adapter, refer to page 2-18 for exact types and order codes of the blocks.

A maximum of four adapters can be possibly used per contactor and each adapter can hold one BFX10, G484, G485, G486 and G487.

Bridge rectifier (Faston terminals).

11 BA1575 1	B115-B145-B180	1	0.170
11 BA1700 1	B250-B310-B400	1	0.230
11 BA1799	B500-B630-B630 1000 B1250-B1600	1	0.520

Coil protection

11 BA1553	B115-B145-B180	1	0.042
11 BA1678	B250-B310-B400	1	0.079
11 BA1803	B500-B630-B630 1000 B1250-B1600	1	0.164

Coil assembly (Coil, rectifier and coil protection).

11 BA1546ⓐ	B115-B145-B180	1	1.220
11 BA1671ⓐ	B250-B310-B400	1	2.290
11 BA1796ⓐ	B500-B630-B630 1000 B1250-B1600	1	4.650

ⓐ Available for AC supply only.

ⓑ Add the coil voltage digit. Standard voltages are:
– AC/DC 24 / 48 / 60 / 110-125 indicate 110 / 220-240 indicate 220 /
380-415 indicate 380 / 440-480V indicate 440.

Example: 11 BA1546 110 for B115-B180 contactor coil assembly
suitable for 110-125VAC/DC supply.

ⓒ Add the coil voltage digit. Standard voltages are:
– AC/DC 48 / 60 / 110-125 indicate 110 / 220-240 indicate 220 /
380-415 indicate 380 / 440-480V indicate 440.

Example: 11 BA1796 110 for B500-B1600 contactor coil assembly
suitable for 110-125VAC/DC supply.

For B1250 and B1600, add only 110 for 110-125VAC or 220 for
220-240VAC since these are the only standard voltages available.

ⓓ During coil replacement operations, always reinsert dampers (1 pair for
B115-B180; 2 pairs for B250-B1600) and fixed magnetic core which one
finds in the original coil assembly.

MOUNTING POSITION OF CONTACTORS

ON VERTICAL PLANE

The performances given in this catalogue have been established with contactors mounted on a vertical plane with line terminals facing upwards and load terminals facing downwards.

All contactors can be mounted with a $\pm 30^\circ$ inclination to the vertical axis of the contactor without any derating.

For BF series contactors, this inclination can reach $\pm 90^\circ$, that is with the terminals are facing towards left and right.

For BG mini-contactors:

- Position A, with coil terminals A1-A2 facing downwards, is not recommended.
- The position with coil terminals A1-A2 facing upwards is not recommended for mini-contactors with NC contacts.

ON VERTICAL PLANE WITH 30° INCLINATION

All contactors can be mounted on a plane which varies in respect to the vertical up to $\pm 30^\circ$ angle.

On the average, a 5% increase of the minimum pick-up voltage in -30° position can be noted.

This inclination is greater than the one prescribed by main naval registers.

ON HORIZONTAL PLANE (FOR BF SERIES CONTACTORS)

Considerable performance variations can be noted.

It is necessary to check the two possible mounting positions:

- when the contactor is energised, the movable equipment moves upwards.
- when the contactor is energised, the movable equipment moves downwards.

In the first case, it is difficult to close the contactor while in the second, to open it.

The variables which could influence the contactor performance, in addition to the two mounting positions, are:

- type of contactor
- type of control
- contact configuration
- number and type of add-on blocks
- permissible tolerance of auxiliary voltage variation
- ambient temperature.

NOTE: Position B is not recommendable.

Customer Service can provide further information concerning operational performance of contactors mounted on a horizontal plane; see contact details on inside front cover.

DYNAMIC TYPE TESTS

Our contactors have sustained dynamic testing, with contactor mounting position rotated $\pm 22.5^\circ$ in respect to the three orthogonal axes.

IEC UTILISATION CATEGORIES DC1, DC3 AND DC5.

POLE CHARACTERISTICS

CHOICE CRITERIA

The elements to be considered for the contactor choice are:

- Rated operational current I_e
- Rated operational voltage U_e
- Utilisation category and L/R time constant
- Eventual verification of electrical life.

OPERATING CONDITIONS

Indicated current is valid for:

- Ambient temperature ≤ 55°C
- Operating cycles: up to 120 cy/h with 60% on-load factor
up to 250 cy/h with 30% on-load factor.

POLES IN SERIES

It is important to use contactors with the indicated number of poles in series depending on operating voltage.

The poles in series can be connected to one single polarity or divided between the two polarities of the circuit indifferently.

NOTE. For voltages lower than 30V, the diagrams given in figures 3 and 4 are not recommendable since voltage drops can take place. In these cases, it is better to use poles in parallel considering the notes given in the following section.

Examples of poles in series:

Fig. 1

Fig. 2

Fig. 3

Fig. 4

POLES IN PARALLEL

It is possible to increase the electrical life by placing poles in series when using voltages which require 1 or 2 poles in parallel.

Poles in parallel do not increase the maximum operational current given in the following pages; that is, if one pole has a maximum operational current in DC5 of 8A, two poles in parallel, it will always be 8A.

With poles in parallel, it is possible to increase the rated contact capacity (I_{th}) only if the contactor opens and closes in no-load conditions or when used as resistance shunts.

In this case, the contact capacity can be increased.

The value can be obtained by multiplying the rated current of one pole by the K factor given below; e.g.: if one pole carries 10A, three poles in parallel can carry $10 \times 2.2 = 22A$.

Therefore, the operating current is the one indicated in the tables, multiplied by the K factor given below which takes into consideration the unequal current division on the various poles.

2 POLES in parallel K = 1.6

3 POLES in parallel K = 2.2

4 POLES in parallel K = 2.8

Examples of poles in parallel:

1 POLE in series and
2 POLES in parallel

2 POLES in series and
2 POLES in parallel

Fig. 8

MAXIMUM OPERATIONAL CURRENT

See tables on pages 2-50 to 2-52.

OTHER CONDITIONS

For different operating conditions or voltage not included among those indicated in the tables, on pages 2-50 to 2-52, consult Customer Service; see contact details on inside front cover.

IEC SELECTION GUIDE FOR LIGHTING CIRCUIT SWITCHING

GENERAL INFORMATION

The elements which are to be considered for the contactor choice are:

- Type of lamp
- Power factor ($\cos\varphi$)
- With or without power factor correction
- Value of current when switching on and in running conditions.

Depending on the number and type of lamps, it is also important to bear in mind the main discriminating characteristics given below for the contactor choice:

- Incandescent lamps → contactor making capacity
- Lamps not corrected → rated contactor current in AC1
- Lamps corrected → rated contactor current in AC3

The table below summarises the major characteristics depending on the more commonly used type of lamps:

Type of lamps	Switching on Multiple of I_n ❶	$\cos\varphi$	Switching off Multiple of I_n ❶	$\cos\varphi$
Incandescent	15	1	1	1
Mixed light	1.3	1	1	1
Fluorescent	1.15 - 1.3	0.2	1	0.3 - 0.5 (not corrected) 1 (corrected)
High-pressure mercury vapour	1.5 - 1.75	0.2	1	0.45 - 0.7 (not corrected)
High-pressure sodium vapour	1.3 - 1.5	0.2	1	0.3 - 0.5 (not corrected)
Low-pressure sodium vapour	1	0.2 - 0.5	1	0.2 - 0.5 (not corrected)
Metal halide	1.7 - 2.1	0.2	1	0.4 - 0.5 (not corrected)

❶ I_n = Rated lamp current.

❷ For 220/240V circuits, either single-phase (between phase and neutral) or 2-wire (between phase and phase), the maximum number of lamps is as per the table.

For three-phase circuits with neutral 380/415V or 220/240V, the maximum number of lamps controlled by the same contactor is $n \cdot 3$.

For three-phase 380/415V circuits without neutral, the maximum number of lamps controlled by the same contactor is $n \cdot \sqrt{3}$.

Electrical life is 100,000 cycles up to 55°C.

❸ Incorporated capacitor.

❹ Total.

① For 220/240V circuits, either single-phase (between phase and neutral) or 2-wire (between phase and phase), the maximum number of lamps is as per the table.
 For three-phase circuits with neutral 380/415V or 220/240V, the maximum number of lamps controlled by the same contactor is $n \cdot 3$.
 For three-phase 380/415V circuits without neutral, the maximum number of lamps controlled by the same contactor is $n \cdot \sqrt{3}$.
 Electrical life is 100,000 cycles up to 55°C.

CONTACTORS FOR LIGHTING APPLICATIONS FOR NORTH AMERICA

In general, the North American market refers to lighting contactor ratings in Amperes, without distinction between incandescent or ballast type of load. Incandescent lamps with tungsten filament have very low Ohmic resistance when cold. As a result, the closing current is very high but also very short. On the other

hand, discharge lamps with ballast have highly inductive closing current and its duration depends on the type of lamp. Thus, ratings are selected for mixed lamp loads which consider the higher incandescent in-rush given below.

① Duo mounting or circuit, with power factor improvement, is obtained by matching an inductive circuit to a capacitive circuit.

POSITIVE (FORCE) GUIDED CONTACTS

Positive (force) guided contacts are a requirement in safety circuits to correctly monitor the status of normally open power contacts. Guided contacts imply that Normally Open (NO) and Normally Closed (NC) operate together reciprocally but can never be simultaneously closed, even in the case NO contacts weld. Due to the ever-growing importance of safety in all aspects of electrotechnology, IEC/EN authorities introduced in product standards, a few years ago, details to define the terminology, requirements, tests, specifics and symbology of auxiliary contacts with these characteristics as follows:

- IEC/EN 60947-4-1 Annex F

Applied to contactors with incorporated auxiliary contacts

This standard includes details about "Requirements for auxiliary contact linked with power contact" and has designated them as "mirror contacts". It is applied to auxiliary contacts mechanically linked with power contacts of a contactor.

- IEC/EN 60947-5-1 Annex L

Applied to auxiliary contact elements

These elements have been designated as "mechanically linked" and to avoid confusion with characteristics detailed in the standard for contactors, they are dealt within this other standard.

Linkage between the auxiliary and main contacts is not covered by this other standard.

Even so, this does not prevent a given auxiliary contact to comply with and satisfy both requirements for "mirror contact" described above and for "mechanically linked contact" given below.

At the same time, it is also very important to be aware of the fact that control circuit devices actuated externally (e.g. push buttons or limit switches) do not have mechanically linked contact elements. Such devices, in safety applications, generally have contacts with direct opening action.

In the past, mechanically linked contact elements have been referred to as forced contacts, positively activated contacts or linked contacts.

Details about "Special requirements for mechanically linked contacts elements" included in control circuit devices where actuating force is provided internally, for instance control relays, like Lovato Electric BG00 and BF00 types.

A mirror contact is defined to be a normally-closed auxiliary contact which cannot be in closed position simultaneously with a normally-open power contact. In the past, mirror contacts were called positively-guided contacts, forced contacts, linked contact or positively-driven contacts.

Now, to satisfy standard requirements, particular constructional details, such as minimum gap tolerance through which the mobile contact travels are necessary and the points of actuation are closer to the actual contact position.

A typical application of this type of contact is to have a highly reliable monitoring of the contactor status, in equipment control circuits, although it is also recommended to provide self-checking of this contact circuit since the contact itself should not be relied upon exclusively as a means to ensure safety. It is important to consider The symbol of this type of contact is the following and identifies mirror contacts, marked directly on the contactor itself or included in the relative documentation for types with incorporated auxiliary contact.

Mechanically linked contacts elements are combinations of n Make contact element(s) and m Break contact element(s) designed in such a way that they cannot be in closed position simultaneously. This signifies that:

- "While any of the n Make contact element(s) is closed, none of the m Break contact element(s) shall be closed."
- "While any of the m Break contact elements(s) is closed, none of the n Make contact element(s) shall be closed."

A control circuit device can have more than one group of mechanically-linked contact elements.

A typical application of mechanically linked contact elements is self-monitoring in machine control circuits.

This type is characteristic and standard supplied in several types of Lovato Electric control relays and auxiliary contact blocks which have at least one NO and one NC contacts.

The symbol for mechanical linkage is identified in the circuit diagrams by a double parallel line connecting a filled circle (left symbol) on each of the mechanically linked contacts or marked on the device (right symbol) containing some or all mechanically linked contacts as follows:

For exact details of our products related to these two types of contact definitions, consult Customer Service for information; see contact details on inside front cover.

POWER FACTOR CORRECTION CAPACITORS

CHOICE CRITERIA

The contactor during the closing transition is influenced by electrical currents having high frequencies and high amplitudes. The frequencies of these currents range between 1 and 10kHz; the amplitudes must have values lower than the maximum permissible current peak of the contactor to be used.

AMBIENT OPERATING CONDITIONS

Ambient temperature: $\leq 50^\circ\text{C}$.
 For temperatures higher than 50°C up to 70°C , stated maximum operational power ratings are to be reduced by a percentage equal to the difference between the ambient temperature and 50°C .
 Operating cycle: ≤ 120 cy/h
 Electrical life: $\geq 100,000$ cycles.

SELECTION GUIDE

Contactor	IEC rated current	Maximum permissible peak current	IEC maximum operational voltage	Fuse	IEC maximum operational power at voltages:			
					220V	380V	415V	500V
Type	[A]	[A]	[V]	gG	[kvar]	[kvar]	[kvar]	[kvar]
BF09 A	12	500	690	16	4.5	7.5	9	10

BF80	90	3000	690	125	34	60	65	70
BF95	90	3000	690	125	34	60	65	70
BF110	90	3000	690	125	34	60	65	70
B115	130	3200	1000	200	50	87	93	115
B145	150	3400	1000	200	57	100	108	130
B180	170	3600	1000	250	65	112	122	150
B250	240	5100	1000	315	91	158	172	210
B310	265	5900	1000	315	105	184	200	245
B400	320	7500	1000	400	122	211	230	280
B500	500	9000	1000	630	190	330	360	430
B630	610	11000	1000	800	230	400	432	520

The use of contactors with the above operational powers is allowable only when the peak current, in the installation point of the power factor correction board, is lower than the values stated in the table.

If this condition is not verified, it is necessary to use limiting inductances or specific contactors stated on page 2-12. Consult Customer Service (see contact details on inside front cover) to obtain detailed information on the correct use of contactors without limiting inductances.

LIMITING INDUCTANCES

The use of limiting inductances is imperative when the system inductances (line transformer and cables), upstream of the power factor correction panel, are not able to maintain the maximum connecting current within the limit value of the contactor used.

FAST DISCHARGE RESISTANCES OF CAPACITORS

The use of the contactor, according to the wiring diagram given, allows the fast discharge of the capacitors as well as the instantaneous disconnection of the capacitors from the mains when the coil is de-energised.

The resistances, indicated in the following table, guarantee the discharge within a maximum time of 2 seconds.

Capacitor power [kvar]	Voltage 220-230V		Voltage 380-500V	
	[Ω]	[W]	[Ω]	[W]

SPECIAL CONTACTORS FOR POWER FACTOR CORRECTION CAPACITORS

GENERAL CHARACTERISTICS

These contactors are equipped with early-make contacts. This special type of contact has the purpose of connecting for a very brief interval, 2-3ms, during the contactor closing, resistors which limit the connecting current of the capacitors. These resistors are then excluded when the closing operation is complete and the current capacity is conveyed to the main contacts. With this type of circuit, it is possible to obtain minor wear of all the components of the system especially fuses and capacitors ensuring a longer life and better reliability. The contactors are particularly suitable for use in automatic power factor correction panels since there is no need of limiting inductances and a source of heat has been eliminated. In this way, these modular electric switchboards can be more compact.

The BFK version, figure 1, is designed for three-phase switching. The peculiarity of this type is in the contacts, suitable to connect limiting resistors, which close only for the time needed to limit any in-rush current peak and then reopen to avoid eventual flow of residual currents through the resistors.

AMBIENT OPERATING CONDITIONS

Ambient temperature: $\leq 50^\circ\text{C}$

For ambient temperature higher than 50°C up to 70°C , maximum operational power ratings, indicated in the table, are to be reduced by a percentage equal to the difference between the ambient temperature and 50°C .

Operating cycles: ≤ 120 cy/h.

Electrical life: $\geq 200,000$ cycles.

CHOICE OF CONTACTORS TYPE BFK/BF...K

Fixing		Screw or DIN rail 35mm ^⑥ and 75mm (IEC/EN 60715)					

① Rated insulation voltage Ui for 4-pole types is 690V.

② Derating for use at 61-400 Hz. Consult Customer Service for information; see contact details on inside front cover.

③ Current values guarantee an electrical life of about 200,000 cycles.

④ IEC/EN 60947-1 designation: Pillar terminal.

In addition to the main terminal which has dimensions as mentioned above, there is a second terminal entry 12.3x3.8mm (0.5x0.15in) for flexible busbars.

⑤ IP20 protection warranted to three-pole contactors only by mounting the G265 protection.

⑥ Only three-pole versions can be mounted on 35mm DIN rail.

ELEVATOR EQUIPMENT - Magnetic Motor Controllers per CSA certification File 54332 - Class 2411-03, to requirements of B44.1-04/SME A17.5-2004. Contactors, three or four poles, open type, operating coil 600VAC or less, 380VDC or less.

CONTROL CIRCUIT UTILISATION

The input electronic circuit of the contactor coil B115-B1600 is designed and tested according to IEEEC 62.41 and can withstand a 10 kV impulse voltage (1.2/50 μ s) with 50 Joule energy.
For higher values, the use of an auxiliary step-down voltage transformer is recommended.

CONTACTORS WITH MECHANICAL LATCH

Technical data of mechanical latch G495 type is stated on page 2-26.
Contactors B115-B630 type, can have mechanical latch included or can be predisposed, to be completed with mechanical latch. See pages 2-4 and 2-6 (3-pole version) or 2-8 and 2-10 (4-pole version).

MECHANICAL INTERLOCK BETWEEN CONTACTORS SIDE BY SIDE B115-B630
 The G356 type in Fig. 1, can interlock contactors of the same size or of a different one (e.g.: B115 interlocked to B630).

This interlock cannot be used with B1250 or B1600 contactor.
 Consult Customer Service (see contact details on inside front cover) to interlock B630 1000 three-pole contactors.

2

MECHANICAL INTERLOCK BETWEEN CONTACTORS ONE ON TOP OF THE OTHER B115-B630

It is G356... type, in Fig. 2 to 4, which is provided in six types to allow different fixing interaxis of contactors.
 Contactors of the same size can be interlocked as well as different sizes.

The tables below indicate the interaxis which can be obtained with the various interlock types; with terminal protections (INTERAXIS A) and without terminal protection (INTERAXIS B).

INTERAXIS A [mm] - For contactors with terminal protection

To interlock two contactors B630 1000, use type G356 6 only.
 To interlock two contactors B1250 or B1600, it is imperative to use two pieces of type G356 6, one fixed on the left side and the other on the right; refer to Fig. 4.

Interaxis B is 470-500mm (18.5-19.7") for B630 1000, B1250 or B1600.
 The B1250 or B1600 cannot be interlocked with the other types of the B series.

CONTACT BLOCKS APPLIABLE TO CONTACTORS WITH MECHANICAL INTERLOCK

Auxiliary contact blocks G350 or G354 can be mounted according to the combinations below when the mechanical interlock is used (see parts in blue in Figure 1) or the G358 adapter with the auxiliary blocks as per the combinations given in Figure 2.

Technical characteristics are given on page 2-26.

MECHANICAL LATCH

Characteristics are given on page 2-26.

This device can only be introduced in to predisposed contactors otherwise contactors can be supplied complete with the latch already incorporated.

See note ④ on pages 2-4, 2-8 and 2-10, or note ⑤ on page 2-6.
